

WITH STRENGTH AND FLEXIBILITY, YOUR LABORATORY IS IMPOWERED™

Connectivity Solution

There was a day when clinical labs relied on the capabilities of their LIS to provide connectivity to various disparate systems. Those days are

“With the launch of Data Innovations software, we were able to reduce our workforce by seven full-time positions; we had fewer errors and simplified processing.”

*Mark Ballard,
Chief Information Officer
Mid America Clinical
Laboratories*

over. Data Innovations leads the way with the connections you need to interface automation, instrumentation, information systems and locations. Through the years we’ve worked with virtually every LIS/HIS and diagnostic equipment manufacturer. That experience translates into faster, easier installations for you—even if you need to connect more than one LIS or more than one site.

Connectivity through Instrument Manager supports:

- Library of 700+ drivers for LIS and instruments
- Interface instruments to multi-LIS systems concurrently
- Capacity for 200+ instruments per system
- Use one system to support multi-locations
- Multiple connectivity options: TCP/IP, serial, LAT, File I/O, ODBC and more

With Data Innovations’ unique, powerful Notifier application, you can customize the system to send a message to designated recipients whenever a defined event is triggered. For example, if a connection has an error condition.
