**An Auto Verification Story:**

CompuNet Clinical Laboratories needed a way to maintain quality while meeting customer demands in light of a shrinking supply of qualified laboratory personnel. Data Innovations provided a solution using Instrument Manager™ for autoverification that resulted in consistency of result production, improved quality and made more efficient use of the staff's time. This allowed CompuNet to offer additional tests in house and significantly improve turnaround time for routine work.

- 45% reduction in the steps required to perform results review
- 98.6% reduction in the number of samples requiring staff review
- Reduction in tech time by 4 hours per day per instrument group per site

... and we are just getting started.
